

Summer Upgrades to the 4102 Student Computer Lab

New Chairs, New Scanner, New General Study Desks . . .

The lab received 100 new computer chairs for better comfort on those long study days! The old chairs were either reused in other locations on campus or the really bad ones that are 20+ years old, headed to surplus.

New Scanner

Study Area

Another improvement is that we've added a new multi-page "Snap Scan" scanner that scans paper directly to PDF. This means, scanned documents will automatically be created in a PDF format and will be able to upload directly to canvas. No more having to find a free program on the internet to do this conversion. The flatbed scanner is still available for scanning pages from books as the Snap Scan cannot do this function.

There are instructions for operation for both scanners on the table where they sit. There will be one of these "Snap Scan" scanners in the library before the fall term begins as well.

Lastly, as the reorganizing of the library is in process this summer, we inherited some study stations and small tables with chairs down stairs. These have been located in the long hallway outside the 4102 "quiet study" computer lab.

This area has been labeled a "general study area". Please be respectful of others around you and keep your conversations at a low level. There are no power outlets, no task lighting and no computers. However this is an excellent place to use your own battery operated electronics or just do some book work, relax, and hang out. Keep in mind this is a busy hallway for the TSS personnel, the Black Box Studio and students. Keep an eye on your belongings at all times.

Let me know if you have any questions!

Thanks,
Deann Larsen
